

M-Files Academy Roadmap

This document serves as a centralized reference for the M-Files Academy learning roadmap. It outlines the planned sequence of M-Files Academy courses and will be updated as progress is made. The purpose is to provide clear visibility into which courses are planned, in progress, and completed

All these courses in the M-Files Academy.

Course lineup,

1. Introduction to M-Files Academy (Approximately - 5 min)

Introduce to the M-Files Academy platform

Main topics,

1. Content
2. Completion rules

2. Technical Enablement: Introduction for New Partners (Approximately - 2h)

This introductory course is designed for new M-Files partner employees in technical roles. It provides role-based learning paths, recommended resources, and guidance on navigating key platforms such as the Partner Portal and M-Files Community. The course serves as a reference index with no fixed completion requirements.

Main topic,

1. INTRODUCTION
2. ACCESS TO IMPORTANT RESOURCES
3. SETUP FOR DEMO AND TEST
4. M-Files Cloud
5. M-Files Product Family and extended features
6. LEARNING PATH: Core eLearning Courses
7. LEARNING PATH: PARTNER CERTIFICATION BY ROLE
8. What's next?

3. M-Files Design Essentials (Approximately - 2h 15min)

This course enables participants to discuss key M-Files design decisions that have a significant impact on user experience and is intended for project team members involved in M-Files design projects.

Main topics,

1. Introduction
2. Metadata Structure
3. Views
4. Workflows
8. Permissions
9. Integrations
10. M-Files Academy Evaluation

4. M-Files User (Approximately - 1h 15min)

This course introduces new users to M-Files and covers the fundamental concepts needed to start working with the system. It includes theory, demos, interactive exercises, and refresher quizzes.

Main topics,

1. Introduction
2. Saving Information
3. Finding Information
4. Modifying and Sharing
5. Managing Information
6. M-Files Academy Evaluation

5. M-Files Application Developer Growth Program (Approximately - 50h)

This course is a growth program designed to help participants implement customized M-Files vault applications efficiently. It requires basic programming skills and a foundational understanding of M-Files methodology. The content provides practical guidance on applying programming concepts within the M-Files context, includes hands-on exercises, and serves as a reference that can be revisited when needed.

Main topics,

1. General
2. VAF Application Development
3. Consulting Tools
4. Testing
5. Final test (Certified M-Files Developer)
6. FEEDBACK

6. Certified M-Files Developer (Approximately 8 – 12h)

This certification test validates your ability to develop M-Files vault applications using the Vault Application Framework (VAF). **Candidates are strongly recommended to complete the M-Files Application Developer Growth Program beforehand.** The test is completed individually, with reference materials permitted. Additional details are available in the Partner Portal.

Main topics,

1. Before Starting the Test
2. Certification Test

7. M-Files Business Administrator (Approximately – 5h)

This course is designed to help participants understand and manage M-Files metadata structures to support business needs and user workflows. It covers creating and adjusting metadata elements, exploring use cases, and fine-tuning the system as requirements change. The course includes lessons, demos, and interactive exercises, with sessions lasting 10–30 minutes. Prior completion of the M-Files Design Essentials and M-Files User courses is recommended. Content applies to both legacy and current M-Files Desktop interfaces, and available features may vary based on permissions and service agreements.

Main topics,

1. Metadata Structure
2. Connections
3. Views
4. Workflows
5. Permissions
6. M-Files Academy Evaluation

8. M-Files Solution Engineer Growth Program (Approximately - 40h)

This course guides participants through designing and implementing a complete project document management vault in M-Files using a practical, hands-on approach. It covers core vault components such as metadata structures, workflows, permissions, dynamic views, and metadata card configuration, along with best practices and related topics like backups. Optional hands-on exercises provide practical experience, and the course prepares participants for the Certified M-Files Solution Engineer test. It is intended for technical roles involved in designing, building, or administering M-Files systems.

Main topics,

1. Server and Vault
2. Metadata structure
3. Workflows and Assignments
4. Dynamic Views
5. Permission settings
6. Metadata card configuration
7. What's next?

9. Certified M-Files Solution Engineer (8h)

This certification test validates your capabilities as an M-Files Solution Engineer, specifically your ability to build M-Files solutions. Completion of the **M-Files Solution Engineer Growth Program is strongly recommended for preparation**. The test is completed individually, without external assistance, though official M-Files documentation may be used for reference. Further details are available in the Partner Portal.

Main topics,

1. Before Starting the Test
2. Certification Test

10.M-Files Solution Architect Growth Program - Learning resources

This course is for technical roles involved in designing, building, or administering M-Files systems. It supports two main goals: preparing for the Certified M-Files Solution Architect test (Section 1) and providing essential technical knowledge to become a qualified Solution Architect. Participants should have basic **M-Files vault administration** experience or complete the **Solution Engineer Growth Program** first. The course links to various learning resources, allowing you to choose topics based on your existing knowledge and needs.

Main topics,

1. Preparing for the M-Files Solution Architect Certification
2. Completing fundamental technical topics for an M-Files Solution Architect
3. Designing solutions
4. Delivering solutions
5. further relevant content for M-Files Solution Architects

11.Certified M-Files Solution Architect - Registration

This module handles registration for the Certified M-Files Solution Architect test and sets up your test environment. A valid Certified M-Files Solution Engineer certification is required. Completion of the M-Files Solution Architect Growth Program courses is strongly recommended for preparation.

Main topics, (You can see all the content after the registration)

Register to Certified M-Files Solution Architect Test

12.Certified M-Files Trainer (Approximately - 50h)

The Trainer Certification Path helps M-Files partners enhance their training skills to ensure smooth project delivery, user adoption, and customer retention. Participants should have completed the prerequisite courses **M-Files Design Essentials** and **M-Files User**. Guided by an M-Files Training Specialist, participants gain practical experience and, upon completion, receive M-Files certified trainer accreditation valid for two years. This path is ideal for technical consultants, sales representatives, and trainers seeking to deliver engaging learning experiences for M-Files users.

Main topics,

1. REGISTRATION
2. STEP 1: ACQUIRE M-FILES PRODUCT KNOWLEDGE
3. STEP 2: OBSERVE A TRAINING EVENT
4. STEP 3: ATTEND THE M-FILES TRAINER WORKSHOP
5. STEP 4: DELIVER AN M-FILES TRAINING
